2007 ACM SIGPLAN International Conference on Object-Oriented Programming, Systems, Languages and Applications
The Dynamic Languages Symposium (DLS) is a forum for discussion of dynamic languages, their implementation and application. While mature dynamic languages including Smalltalk, Lisp, Scheme, Self, and Prolog continue to grow and inspire new converts, a new generation of dynamic scripting languages such as Python, Ruby, PHP, and JavaScript are successful in a wide range of applications. DLS provides a place for researchers and practitioners to come together and share their knowledge, experience, and ideas for future research and development. This year 30 papers were submitted to the Dynamic Languages Symposium of which 9 papers were accepted. The program committee reviewed each paper and met electronically to select papers for the final program. This year we are pleased host invited talks by Mark Miller and Jim Hugunin.
