Welcome from the Chairs

Welcome to the Companion Proceedings for the 4th International Conference on the Art, Science, and Engineering of Programming, named <Programming> 2020.

The International Conference on the Art, Science, and Engineering of Programming is a new conference focused on programming topics including the experience of programming. We have named it <Programming> for short. <Programming> seeks for papers that advance knowledge of programming on any relevant topic, including programming practice and experience.

To build a community and to foster an environment where participants can exchange ideas and experiences related to practical software development, <Programming> hosts several co-hosted events, including workshops, posters and the student research competition. This companion gathers all the papers for these events.

After Brussels, Nice, and Genova, this fourth edition was planned to be held in Porto, Portugal, March 23–26, 2020. Unfortunately, it did not take place due to the COVID-19 outbreak. However, several events still ran virtually including the Convivial Computing Salon (Salon 2020), the 4th International Workshop on Modern Language Runtimes, Ecosystems, and VMs (MoreVMs 2020), and the 6th edition of the Programming Experience Workshop (PX/20).

We are grateful to AOSA, University of Porto, and the City of Porto for sponsoring <Programming> 2020, to ACM SIGPLAN and ACM SIGLOG for conferring the “in-cooperation-with” status, and to all the <Programming> 2020 Organizing and Steering Committee members for the preparation of the event in Porto, as well as its rollback due to the COVID-19 situation.

We want to thank also the Program Committee members and the reviewers of all co-hosted events for their efforts in evaluating the submissions. We especially wish to thank the authors of submitted papers for their support in such a special edition affected by the COVID-19 outbreak.

1st International Workshop on ENgineering Intelligent Applications' Code (ENIAC 2020)

Artificial Intelligence is becoming a mainstream concern in everyday software construction. More and more software companies intend to leverage AI techniques in their products. However, there is a large gap between Programming/Software Engineering and Artificial Intelligence. “Adding intelligent behaviour” to an extensive modern software system is therefore currently more a craft than an engineering domain.

The International Workshop on ENgineering Intelligent Applications' Code, or **ENIAC 2020**, seeks to solve the problem by providing a forum for researchers and practitioners to share and discuss how software systems with an Artificial Intelligence core should be developed.

ENIAC 2020 received a total of 5 submissions that went through a rigorous reviewing process. Every submission received at least three reviews by the PC members, and was carefully discussed until a consensus was reached. All decisions were based solely on the quality of the submission and on the outcome of the discussion. The program committee accepted the two technical papers included in these proceedings, and the one presentation abstract. We hope that the authors of submissions that did not make it to the program will benefit from the reviewers' feedback.

We would like to thank all authors for the set of high-quality submissions, and the program committee for the careful review and discussion.

2nd Interconnecting Code Workshop (ICW'20)

Welcome to the proceedings of the *2nd Interconnecting Code Workshop (ICW'20)*. ICW'20 was planned to be co-located with <Programming> 2020 in Porto, Portugal, in late March, but was cancelled due to the situation around the COVID-19. The submissions are published none-the-less, after review by the program committee.

Modern computer systems are often loosely coupled compositions of heterogeneous components. An important part of modern programming is the art, science, and engineering of interconnecting disparate code components to offer larger services in a reliable and scalable manner. The goal of our workshop was to facilitate an ongoing discussion, and advance the state of the art of interconnecting code in particular.

We had 4 submissions: 2 short papers, and 2 extended abstracts. We accepted the short papers and 1 extended abstract. All submissions were reviewed by the program committee. Overall, we have seen a continuation of the discussion around polyglot programming in GraalVM, but also how we might go about logic programming in connection with the Swift programming language. Lastly, we got some insights from the German Aerospace Center (DLR) on how they combine tools specific to various engineering disciplines into high-level workflows.

We would like to thank our contributors for agreeing to share their work and insights. We hope that you too will find the proceedings thought-provoking. We encourage you to get in touch with the authors, to exchange further ideas, and advance the state of the art, science, and engineering of interconnecting code.

4th International Workshop on Modern Language Runtimes, Ecosystems, and VMs (MoreVMs'20)

Welcome to the proceedings of the fourth Workshop on Modern Language Runtimes, Ecosystems, and VMs (MoreVMs'20).

MoreVMs aims to bring together industrial and academic programmers to discuss the design, implementation, and usage of modern languages and runtimes. This includes aspects such as reuse of language runtimes, modular implementation, language design, and compilation strategies.

This year's workshop took a somewhat unconventional format. <Programming>'20 would have taken place in Porto, Portugal, in March and MoreVMs'20 would have been co-located. Due to the worldwide COVID-19 virus outbreak, however, neither <Programming> nor MoreVMs were run as traditional physical events. MoreVMs'20 was instead run as a virtual event over tele-conferencing.

MoreVMs'20 was the fourth edition of the workshop and continued in the spirit of previous editions: striving to enable an informal and diverse discussion on how languages and runtimes are currently being utilized, and where they need to improve further.

Presentation proposals were in the form of extended abstracts and, new this year, 400-word talk proposals. Submissions discussing experiences, work-in-progress, as well as future visions, from either an academic or industrial perspective were welcomed. The program committee was selected with the intention of having equal parts academic and industrial affiliations. We received 10 submissions, 9 of which were accepted. Four of these submissions were presented virtually, however all accepted submissions will be published.

MoreVMs'20 was lucky to have two virtual invited talks: Roman Kennke from Red Hat spoke about the second generation of Shenandoah GC, and Leszek Swirski from Google gave a talk on how to compile JavaScript in zero time.

Despite the event being virtual, it was surprisingly well attended. Attendees dropped in and out over the course of the event, but there were usually over 40 attendees throughout the online session. All talks from the virtual event were recorded and are available on our website at:

<https://2020.programming-conference.org/home/MoreVMs-2020>.

We would like to thank everyone, the authors, speakers, and attendees for bearing with us with the virtual event. We know that it is not the same as a physical meeting, but given the limitations, we feel it went well. We would also like to thank the program committee for reviewing our submissions. Thank you everyone.

Hopefully see you all *in-person* at MoreVMs'21!

May 2020

Edd Barrett, Fabio Niephaus
MoreVMs'20 Program Co-Chairs

Invited Talks

Compiling JavaScript in zero time*
Leszek Swirski, Google, Germany

Shenandoah GC 2.0
Roman Kennke, Red Hat, Germany

1st International Workshop on New Interfaces for Programming (NIP 2020)

Interfaces for programming have remained mostly unchanged since long time. Usually, software engineers (SE) interact with IDEs through keyboards and mice, and text-based interfaces displayed on computer screens. The field of software visualization (SOFTVIS) investigates the use of visual properties to support software engineering tasks such as programming. More recently, researchers in the field have analyzed the impact of displaying visualizations in virtual and augmented reality (VR/AR). The use of immersive environments have shown not only positive effects on developers' user experience but also on user performance.

The *International Workshop on New Interfaces for Programming* (NIP) aims at gathering experts from (1) the SE community, (2) the SOFTVIS community, (3) the VR/AR community, and (4) the Arts community in order to breed cross-community new interfaces to support programming tasks. The workshop aims at providing a forum for researchers and practitioners from these mostly disconnected research communities.

We received 6 submissions: 3 full papers, 2 new ideas and early results papers, and 1 lightning talk. Full and short papers were peer-reviewed by 3 members of the program committee. The submitted lightning talk was assessed based on the suitability of the topic by the organizing committee. In the end, we accepted the 6 submissions. A keynote by Rainer Koschke from University of Bremen on "VR/AR Software Visualization is for Collaboration" is included in the program.

Unfortunately, scientific events had been greatly affectedly by the situation with COVID-19, and therefore, prevented the NIP 2020 workshop to happen. The accepted papers have been published, as originally planned, in the ACM DL as a proceeding companion of the hosting conference <Programming> 2020.

Thank you very much to paper authors for trusting on this event to disseminate you work. Also, we would like to thank the members of the program committee who provided authors with detailed reviews of their work.

The workshop can be found on the web at:

<https://2020.programming-conference.org/home/nip-2020>

4th International Workshop on Programming Technology for the Future Web (ProWeb 2020)

Full-fledged **web applications** have become ubiquitous on desktop and mobile devices alike. Whereas “responsive” web applications already offered a more desktop-like experience, there is an increasing demand for “rich” web applications (RIAs) that offer collaborative and even off-line functionality—Google Docs being the prototypical example. Long gone are the days that web servers merely had to answer incoming HTTP request with a block of static HTML. Today’s servers react to a continuous stream of events coming from JavaScript applications that have been pushed to clients. As a result, **application logic and data** is increasingly **distributed**. Traditional dichotomies such as “client vs. server” and “offline vs. online” are fading.

The 4th International Workshop on Programming Technology for the Future Web, or ProWeb20, is a forum for researchers and practitioners to share and discuss new technology for programming these and future evolutions of the web.

ProWeb20 received a total of 7 submissions. Of these, one submission was not considered since no PDF was submitted by the given deadline. The six remaining submissions went through a rigorous reviewing process. Every submission received three reviews by the PC members, and was carefully discussed until a consensus was reached. All decisions were based solely on the quality of the submissions and on the outcome of the discussion; we did not target any minimum or maximum number of papers to be accepted. The program committee accepted two technical papers to be included in these proceedings, and three presentation abstracts available on the website of the workshop. The one paper which was not accepted as a full paper was offered a talk slot.

Unfortunately, the COVID-19 outbreak has prevented the regular “physical” execution of the workshop. Because the safety and well-being of conference participants was our priority, we decided to not hold the workshop as planned. Nevertheless, we would like to thank all authors for submitting a set of high-quality submissions, and the program committee for their careful review and discussion of every submission.

Andrea Stocco (Università della Svizzera italiana)

Simon Fowler (University of Edinburgh)

Filippo Ricca	Università degli Studi di Genova	Italy
Pascal Weisenburger	Technische Universität Darmstadt	Germany

6th International Workshop on Programming Experience (PX/20)

The *Programming Experience (PX) Workshop* is about what happens when programmers sit down in front of computers and produce code, especially in an exploratory way. Do they create text that is transformed into running behavior (the old way), or do they operate on behavior directly (“liveness”); are they exploring the live domain to understand the true nature of the requirements; are they like authors creating new worlds; does visualization matter; is the experience immediate, immersive, vivid and continuous; do fluency, literacy, and learning matter; do they build tools, meta-tools; are they creating languages to express new concepts quickly and easily; and curiously, is joy relevant to the experience?

Correctness, performance, standard tools, foundations, and text-as-program are important traditional research areas, but the experience of programming and how to improve and evolve it are the focus of this workshop. In this edition we focused on live, exploratory programming, but also welcomed a wide spectrum of contributions on programming experience.

PX/20 was the 6th edition and the first online-version of the workshop: Participants met virtually, authors presented their work in lightning talks, and everyone engaged in lively discussions that extended beyond the end of the scheduled time.

Our post-workshop proceedings allowed authors to reflect on the feedback they got from the program committee and the workshop participants and improve their submission.

We would like to thank our program committee, all workshop attendees, and most importantly our authors for their contributions, constructive criticism, hard work, and willingness to share their ideas.

Convivial Computing Salon

It is our pleasure to welcome you to the proceedings of the *Convivial Computing Salon* at <PROGRAMMING> '20.

The Salon continues in the footsteps of the previous three Salon des Refusés workshops at the <PROGRAMMING> conference. The goal is still to provide space for unorthodox, thought-provoking ideas that question and expand what programming research should be about. To this end, we request papers that can provoke interesting discussions among the audience, rather than evaluating papers by their use of proofs, measurements, or controlled user studies.

In *Tools for Conviviality*, Ivan Illich criticized the damage to society from technology escalation. The Convivial Computing Salon invited investigations from this perspective on computing technology. As the Call for Papers says: we were promised bicycles for the mind, but we got aircraft carriers instead.

Each submitted paper was reviewed by four program committee members, and accepted papers were presented along with a critique that presents an alternative position, develops additional context, or summarizes discussion about the work.

Because of the COVID-19 pandemic the conference to be held in Porto, Portugal was cancelled, and instead the Salon was held online from May 3-9 2020. Links to slides and recordings can be found at <https://docs.google.com/spreadsheets/d/1tuyRit9qQN1kwckS3rND8GmvSKPo-qBJW8aroEIwFt8/edit#gid=0>.

We hope that this years' papers and critiques inform and inspire our readers and future research. We would like to thank the authors and presenters for their submissions and the program committee for their thoughtful and constructive reviewing.

Poster Session of <Programming> 2020

Welcome to the posters session at <Programming> 2020. Posters are an integral part of the conference and aim at showcasing very recent or ongoing work, clarifying problem statements, vetting solutions, or identifying evaluation methods in an interactive way. They are an excellent opportunity for authors to receive feedback from the <Programming> community and encourage one-to-one and small group discussions on a technical topic.

This year, the call for posters attracted 6 submissions, half of which pertaining to papers accepted to other <Programming> 2020 tracks. The other half were accompanied by a two-page extended abstract and report early and ongoing works. Two of these submissions were accepted for inclusion in these proceedings:

Helping Software Developers through Live Software Metrics Visualization

Sara Fernandes, André Restivo, Hugo S. Ferreira, Ademar Aguiar

Overviewing the Liveness of Refactoring for Energy Efficiency

Emanuel Moreira, Filipe F. Correia, João Bispo

All the submitted posters were allowed to be presented at the conference. Even though the 2020 edition in Porto could not physically take place due to the COVID-19 pandemic, these posters were made available at the conference website and social networks to promote visibility and discussion around the works.

Thank you all poster authors, and keep on <Programming>!

<Programming> 2020 Poster Chairs

<Programming> 2020 Student Research Competition (SRC)

We are delighted to present the presentation abstracts accepted for the first round of the ACM Student Research Competition (SRC) of the fourth International Conference on the Art, Science and Engineering of Programming (<Programming> 2020). Our call for submissions welcomed research results from undergraduate and graduate ACM student members on any of the areas covered by the conference. We received a total of 8 submissions which, in the spirit of the competition, each received three lightweight and constructive reviews from the members of the program committee.

We would like to thank the members of the program committee for evaluating the submitted presentation abstracts:

- Nada Amin (Harvard University, USA)
- Matthew Flatt (University of Utah, USA)
- Yu David Liu (State University of New York (SUNY) Binghamton, USA)
- Hidehiko Masuhara (Tokyo Institute of Technology, Japan)
- Luca Padovani (University of Turin, Italy)

Nanette Hernández provided excellent administrative support on the side of ACM. Last but not least, we are grateful to Ademar Aguiar, General Chair of <Programming> 2020, for his organizational support and to Robert Hirschfeld, member of the Steering Committee, for the invitation to organize the student research competition.

Convivial Computing Salon (Salon 2020)	xxii
2020 Posters	xxvi
2020 Student Research Competition	xxvii

1st International Workshop on ENgineering Intelligent Applications' Code (ENIAC 2020)

Three Trillion Lines: Infrastructure for Mining GitHub in the Classroom Toni Mattis, Patrick Rein, and Robert Hirschfeld — <i>HPI, Germany</i>	1
Achieving Guidance in Applied Machine Learning through Software Engineering Techniques Lars Reimann and Günter Kniesel-Wünsche — <i>University of Bonn, Germany</i>	7

2nd International Workshop on Interconnecting Code (ICW 2020)

LogicKit: Bringing Logic Programming to Swift Dimitri Racordon and Didier Buchs — <i>University of Geneva, Switzerland</i>	13
Supporting the Composition of Domain-Specific Software via Task-Specific Roles Brigitte Boden, Robert Mischke, Alexander Weinert, and Andreas Schreiber — <i>DLR, Germany</i>	17
User-Defined Interface Mappings for the GraalVM Alexander Riese, Fabio Niephaus, Tim Felgentreff, and Robert Hirschfeld — <i>HPI, Germany; Oracle Labs, Germany</i>	19

4th International Workshop on Modern Language Runtimes, Ecosystems, and VMs (MoreVMs 2020)

Enhancement of OpenJDK Biased Locking for Infrequent Lock Contention Ting Wang, Michihiro Horie, Kazunori Ogata, Hao Chen Gui, Xiao Ping Guo, and Yang Liu — <i>IBM, China; IBM, Japan</i>	23
Profiling Streams on the Java Virtual Machine Edgar Eduardo Rosales Rosero, Andrea Rosà, and Walter Binder — <i>USI Lugano, Switzerland</i>	27
Running Parallel Bytecode Interpreters on Heterogeneous Hardware Juan Fumero, Athanasios Stratikopoulos, and Christos Kotselidis — <i>University of Manchester, UK</i>	31
Superoptimization of WebAssembly Bytecode Javier Cabrera Arteaga, Shrinish Donde, Jian Gu, Orestis Floros, Lucas Satabin, Benoit Baudry, and Martin Monperrus — <i>KTH, Sweden; Mobimeo, Germany</i>	36
Toward Presizing and Pretransitioning Strategies for GraalPython Johannes Henning, Tim Felgentreff, Fabio Niephaus, and Robert Hirschfeld — <i>HPI, Germany; Oracle Labs, Germany</i>	41
Towards Dynamic SQL Compilation in Apache Spark Filippo Schiavio, Daniele Bonetta, and Walter Binder — <i>USI Lugano, Switzerland; Oracle Labs, USA</i>	46

1st International Workshop on New Interfaces for Programming (NIP 2020)

Assessing Textual Source Code Comparison: Split or Unified? Alejandra Cossio Chavalier, Juan Pablo Sandoval Alcocer, and Alexandre Bergel — <i>Universidad Católica Boliviana, Bolivia; University of Chile, Chile</i>	50
Towards Requirements Engineering with Immersive Augmented Reality Nitish Patkar, Leonel Merino, and Oscar Nierstrasz — <i>University of Bern, Switzerland; University of Stuttgart, Germany</i>	55
Towards Visualization of Evolution of Component-Based Software Architectures in VR Elke Franziska Heidmann, Annika Meinecke, Lynn von Kurnatowski, and Andreas Schreiber — <i>DLR, Germany</i>	61
Towards Efficient Interdisciplinary Authoring of Industrial Augmented Reality Applications Ingo Börsting and Volker Gruhn — <i>University of Duisburg-Essen, Germany</i>	65
Program Comprehension for Live Algorithmic Design in Virtual Reality Renata Castelo-Branco, António Leitão, and Catarina Brás — <i>INESC-ID, Portugal; Instituto Superior Técnico, Portugal; University of Lisbon, Portugal</i>	69

4th International Workshop on Programming Technology for the Future Web (ProWeb 2020)

Evolution of the WebDSL Runtime: Reliability Engineering of the WebDSL Web Programming Language Danny M. Groenewegen, Elmer van Chastelet, and Eelco Visser — <i>Delft University of Technology, Netherlands</i>	77
Synthesizing User Interfaces using Functional Reactive Web Abstractions Adam Granicz, Jozsef Uri, and Andras Janko — <i>IntelliFactory, Hungary</i>	84

6th International Workshop on Programming Experience (PX/20)

Multiagent Live Programming Systems: Models and Prospects for Critical Applications Steven L. Tanimoto — <i>University of Washington, USA</i>	90
MATLAB Doesn't Love Me: An Essay Tijs van der Storm and Geor Bakker — <i>CWI, Netherlands; University of Groningen, Netherlands; Amsterdam University Medical Centres, Netherlands; Sosei Heptares, UK</i>	97
Towards a Pattern Language for Interactive Coding Tutorials Tao Dong and Gale Yang — <i>Google, USA</i>	102
Polyglot Code Finder Jan Ehmüller, Alexander Riese, Hendrik Tjabben, Fabio Niephaus, and Robert Hirschfeld — <i>HPI, Germany</i>	106
Visual Design for a Tree-Oriented Projectional Editor Tom Beckmann, Stefan Ramson, Patrick Rein, and Robert Hirschfeld — <i>HPI, Germany</i>	113
Javardise: A Structured Code Editor for Programming Pedagogy in Java André L. Santos — <i>University Institute of Lisbon, Portugal</i>	120

Convivial Computing Salon (Salon 2020)

Wildcard: Spreadsheet-Driven Customization of Web Applications Geoffrey Litt and Daniel Jackson — <i>Massachusetts Institute of Technology, USA</i>	126
Towards a Dynamic Multiscale Personal Information Space: Beyond Application and Document Centered Views of Information Amy Rae Fox, Philip Guo, Clemens Nylandsted Klokmoose, Peter Dalsgaard, Arvind Satyanarayan, Haijun Xia, and James D. Hollan — <i>University of California at San Diego, USA; Aarhus University, Denmark; Massachusetts Institute of Technology, USA</i>	136
Convivial Design Heuristics for Software Systems Stephen Kell — <i>University of Kent, UK</i>	144
Rethinking Programming "Environment": Technical and Social Environment Design toward Convivial Computing Jun Kato and Keisuke Shimakage — <i>AIST, Japan; OTON GLASS, Japan</i>	149

Spreadsheets as Notational Environment for Paper Weaving Jonathan Skjøtt — <i>Takram, UK</i>	158
Can Programmers Escape the Gentle Tyranny of call/return? Marcel Weiher — <i>HPI, Germany</i>	163
Bicycles for the Mind Have to Be See-Through Kartik Agaram	173
Escaping the Prison of Style Antranig Basman and Philip Tchernavskij — <i>Raising the Floor, UK; OCAD University, Canada</i>	187
What It Takes to Create with Domain-Appropriate Tools: Reflections on Implementing the “Id” System Joel Jakubovic — <i>University of Kent, UK</i>	197
Chatting with Glue: Cognitive Tools for Augmented Conversation Max Krieger — <i>Carnegie Mellon University, USA</i>	208

2020 Posters

Helping Software Developers through Live Software Metrics Visualization Sara Fernandes, André Restivo, Hugo Sereno Ferreira, and Ademar Aguiar — <i>University of Porto, Portugal; LIACC, Portugal; INESC TEC, Portugal</i>	209
Overviewing the Liveness of Refactoring for Energy Efficiency Emanuel Moreira, Filipe F. Correia, and João Bispo — <i>University of Porto, Portugal; INESC TEC, Portugal</i>	211

2020 Student Research Competition

Towards Language-Parametric Refactorings Philippe D. Misteli — <i>Delft University of Technology, Netherlands</i>	213
Efficient Editing in a Tree-Oriented Projectional Editor Tom Beckmann — <i>HPI, Germany</i>	215
ReAD: Representational Algorithmic Design Renata Castelo-Branco — <i>INESC-ID, Portugal; University of Lisbon, Portugal</i>	217
A Formalism to Model Higher-Order Function Damien Morard — <i>University of Geneva, Switzerland</i>	219
An Annotation System for Specifying Aliasing Invariants on Object Fields Aurélien Coet — <i>University of Geneva, Switzerland</i>	221
Pattern-Match-Oriented Proof Writing Language Satoshi Egi — <i>University of Tokyo, Japan</i>	223
An Experimental Audio-Tactile Interface for Sculpting Digital Resonance Models using Modelling Clay Jack Armitage — <i>Queen Mary University of London, UK</i>	225
N-gram Models for Code Completion in Pharo Myroslava Romaniuk — <i>Ukrainian Catholic University, Ukraine</i>	227
Author Index	229
